

SAMUEL MICHEAL PELUMI

Frontend-Leaning Full-Stack Developer

Lagos, Nigeria | 09132392431 | mykelsamuel512@gmail.com

github.com/Mykelsown | [Portfolio](#)

PROFESSIONAL SUMMARY

Frontend-leaning full-stack developer with hands-on experience across React, Tailwind CSS, and modern JavaScript, and a growing, deliberately built practice in Go, Node.js, and PostgreSQL. Background in Mechatronics Engineering provides a systems-first approach to problem solving. Active open-source contributor and bounty-program builder, comfortable working through unfamiliar codebases and shipping under real constraints. Currently building toward mid-level full-stack roles.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Go, HTML5, CSS3

Frontend: React.js, Vite, Tailwind CSS, Bootstrap

Backend & Data: Node.js, Go, PostgreSQL, Rust (SQLx), REST APIs

Tools: Git, GitHub, VS Code, Figma

EXPERIENCE

Solana Infrastructure Engineer, *Superteam Nigeria, Advanced Infrastructure Challenge*

[Bounty Program](#)

- Engineered a production-grade Solana transaction infrastructure stack in TypeScript, including Jito bundle construction and Yellowstone/Geyser gRPC streaming.
- Built an AI agent, Tip Intelligence, on the Anthropic SDK to reason about transaction tip strategy.
- Attempted live mainnet bundle submissions and is finalizing remaining leader-window timing logic.

Open Source Contributor, *InheritX (Fracverse)*

[Ongoing](#)

- Contributing a pull request implementing SQLx-based PostgreSQL connection pooling in Rust.
- Maintaining lint-clean, warning-free code to satisfy maintainer review standards via cargo clippy.

Backend Developer, Contract, *KSI Gadgets*

[Ongoing](#)

- Building and maintaining Node.js and TypeScript backend services, including transactional email via Resend.
- Diagnosed and resolved PostgreSQL authentication issues affecting service reliability.

Frontend Developer, *Freelance & Open Source*

[2023 to Present](#)

- Delivered responsive React and Tailwind CSS applications for freelance clients, from mockup to deployment.
- Contributed to frontend issues across multiple public GitHub repositories.

PROJECTS

SkinByWura, *Full-Stack E-Commerce Platform*

- Built a complete React storefront on a custom peach, coral, lime, and ink design system; now developing a layered Go backend with PostgreSQL and migrations.

ClimateGuard, *Hedera Hackathon*

[Oct 2023](#)

- Led frontend development for a decentralized climate-action platform in a 48-hour hackathon; built reusable React components and integrated Web3 wallet functionality with ethers.js.

Forex Risk-Reward Calculator, *Personal Project*

- Built a vanilla JavaScript trading utility that calculates risk, reward, position size, and risk-to-reward ratio.

EDUCATION

National Diploma in Mechatronics Engineering, *Lagos State Polytechnic (LASPOTECH)*

[2021 to 2024](#)

- Capstone project: an automated sun-tracking solar system using Arduino programming and control logic.
